

Mr Ashish Belagali

Ashish Belagali is a CEO of company name Acism Software Private Limited, He is having expertise and involved in Web Design , Custom Software Development , Web Development , Mobile Application Development , Application Development , Project Management , IT Consulting , Information Management , Database Development , Cloud Application Development Software Entrepreneur, Technologist, Researcher, Manager, Leader, Consultant, Author.

Making #SoftwareDevelopment easy.

Web Design , Custom Software Development , Web Development , Mobile Application Development , Application Development , Project Management · IT Consulting , Information Management , Database Development , Cloud Application Development.

Ashish is a tech entrepreneur trying to make a difference & believe that technology should simplify human lives and help them follow the best practices, without coming in their way. Also, practise and preach software development. I created tech products to make it faster, better, cheaper and lower risk forever. We not only do software development using our unique approach, but also help other companies succeed with our technology and expertise and have developed a technology called Xsemble. Xsemble is the Lego block in software development -- enabling visual assembly of tiny software components to make large software applications.

Xsemble enables you to design your software in the form of a flow diagram without needing programmers. The programmers' work is restricted to implementing individual components from ready-made templates.

One of the offshoots of Xsemble is the opportunity to train thousands of young students on technology through practicals and self-learning. I am looking to work with colleges for the same. He love to explore and learn technologies. Through such exploration, had a chance to author a book "Kotlin Blueprints", which was published by Packt Publications, UK.

While managing software projects, people started calling me a "Turnaround Specialist". The title has stuck. I like it because it brings out the special capabilities that it requires as opposed to just calling it project management.

For making projects successful, and realizing that timely and precise communication plays a crucial part of it. So I created a web based tool called "Kommbox". It keeps the project communications in one place and uses color coding for easy understanding. Over the years, Kommbox has evolved into a knowledge bank. It has saved us many miscommunications and frustrating hours trying to mend those.

Recently he attended TiEcon 2020 at Mumbai & served as a lead volunteer in organizing the WIDS Pune 2019 event, served in leadership roles in BNI, Pune Open Coffee Club and IITB Alumni Association in the past.

He speaks on technology and entrepreneurship. Some examples:

- ✓ Took a webinar on "Achieving Success with IT Projects" for MCCIA in April 2020..
- ✓ Took a remote workshop on "Designing Your Own Software" for AIC Pinnacle group in April 2020..
- ✓ Spoke on "Component Based Development" at Xoriant's TechX 2019 event.
- ✓ Delivered "Software Technology Overview" sessions to students of Cummins College and MIT World Peace university, in 2019.
- ✓ Delivered multiple sessions on technology at PMI Pune chapter.
